

SQUARE LOUNGE BATH

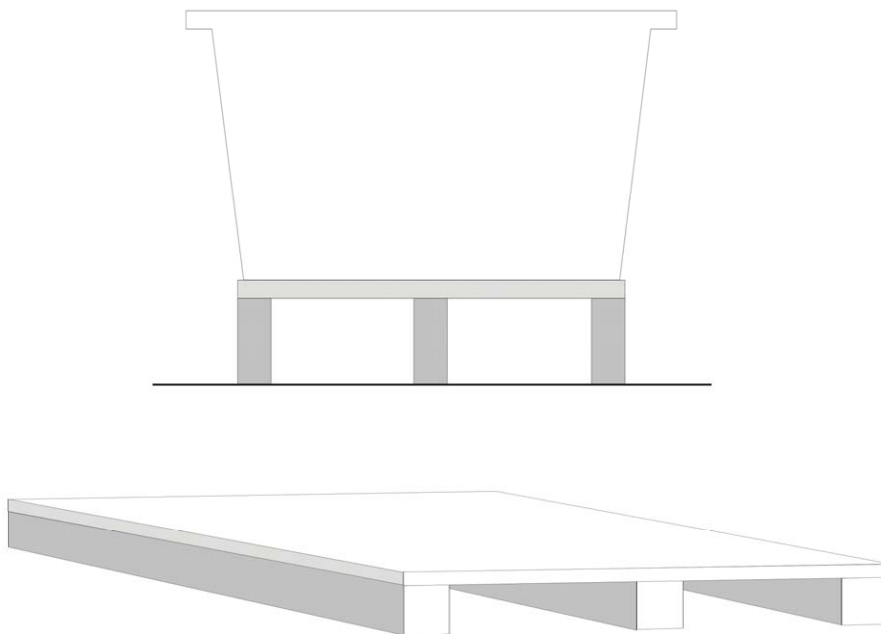

Fitting Instructions for the Square Lounge Bath

During installation the square lounge bath must be treated gently. Please avoid knocking the bath, dropping tools into it, or standing in an unsupported bath.

1. The square lounge bath must be supported on timber deck, we recommend that the deck is 4" x 2" timber bearers laid on edge with 22mm green moisture resistant chipboard. The square lounge bath is then bedded onto this timber deck using expanding foam giving full coverage to support the bath.
2. Please ensure the square lounge bath is weighted **with care** to ensure the expanding foam does not lift the bath. Please ensure all falls are still apparent.
3. Please ensure a timber frame supports the top edge of the square lounge bath. Please note that the timber frame does not push the square lounge bath up, causing stress on the timber batten or bath. The bath edges against the wall can be supported on battens fixed to the wall.

Care Instructions for the Square Lounge Bath

1. To clean the Square Lounge Bath please use non-abrasive cleaners (i.e.) liquid cleaners and a non-scratch scourers. Surface scratches can if necessary removed with T Cut polish.
