

shower channels

recessed wall channel

recessed floor channel

surface channel
(same channel used on floor and wall)

recessed channels are designed to recess into walls and floors, thus providing ample support for the glass but with a minimalist finish. The curved lip allows for a tidy and professional finish, hiding the edge of the tiles or wall.

surface channels are designed to be fitted on top of tiles. The 20mm profiles provide maximum support with a clean and stylish finish.

constructed from polished aluminium

can be fitted using silicone or screws

supplied with a rubber gasket to be fitted inside channelling to protect glass
