ATTENTION: PLEASE READ BEFORE CONTINUING.

This shower head is made of stainless steel, a material that does not release trace of chromium or zinc in water. It is also well known for longevity and for its surface, that remains unchanged in time.

Faucets and plumbing must be inspected and rinsed according to normative before connecting the product to the plumbing system. Always install the supplied filter gasket between the waterfall and the hydraulic system. We also recommend a filter installed upstream of the system to avoid impurities that could irreparably damage the product.

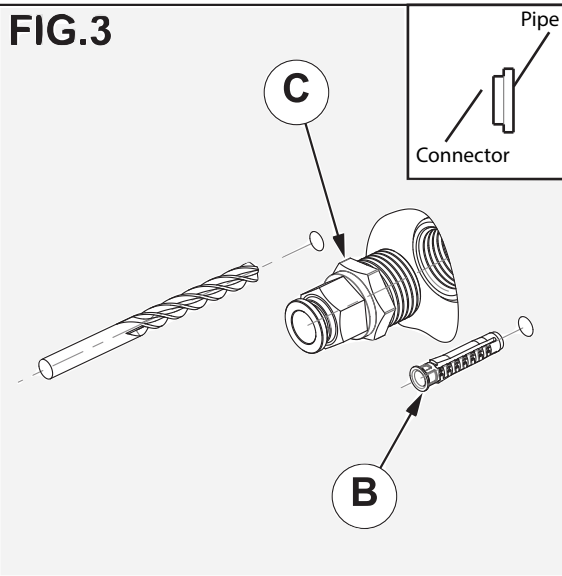

This waterfall can be damaged by the "water hammer" effect, that occurs when the flow of water inside a pipe outburst into the waterfall connector.

FIG.2

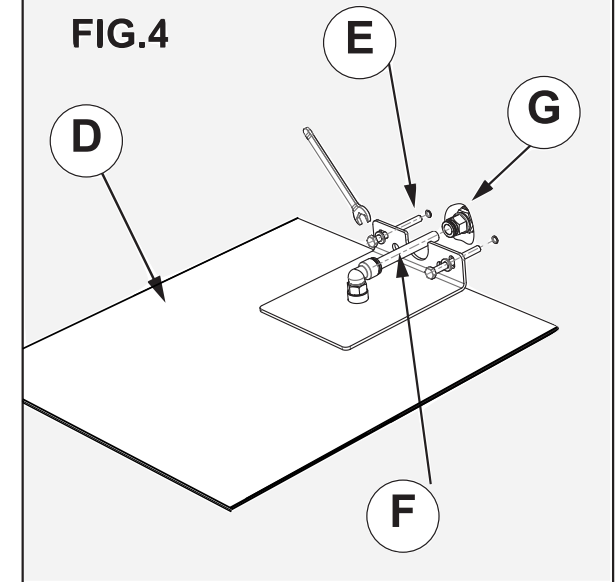

2- Place the waterfall (D) onto the wall, check that the water pipe is in the middle of the bracket and then mark the dowels positions.

FIG.3

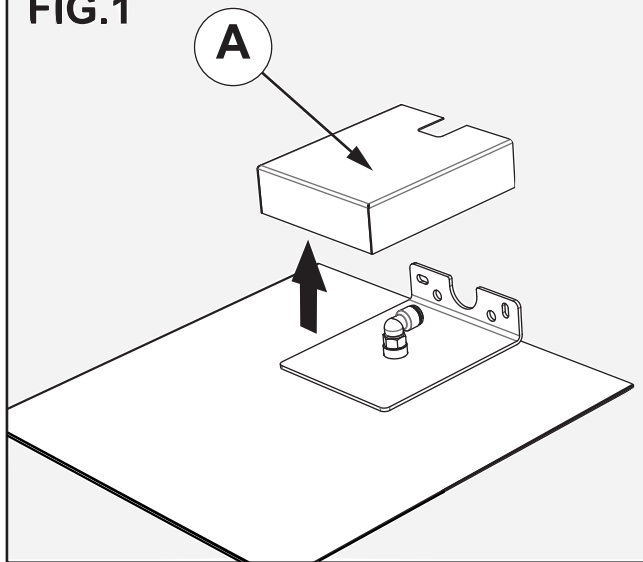

3- Drill on the previously marked points with a 10mm bit
4 - Insert the dowels into the holes (B)
5 - screw the connector (C) onto the system

FIG.4

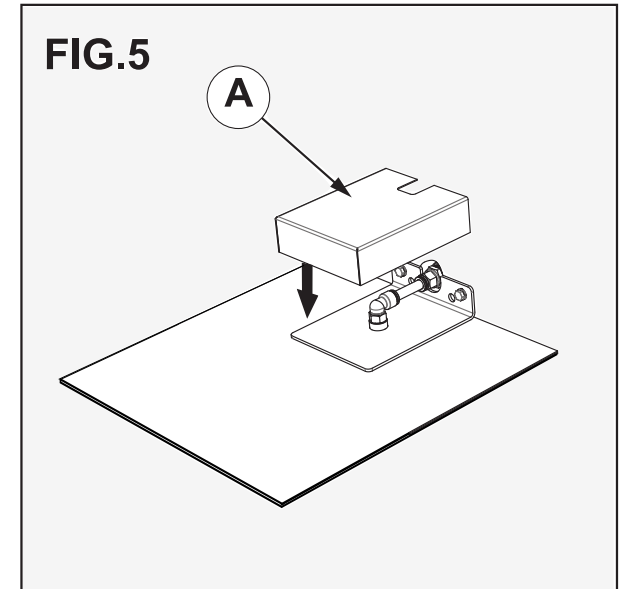

6 - Insert the hose (F) into the connector (G)
7 - place the waterfall onto the wall and tighten the screws (E) in the dowels

FIG.1

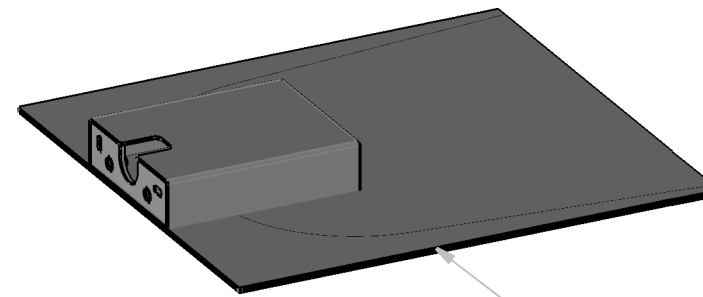

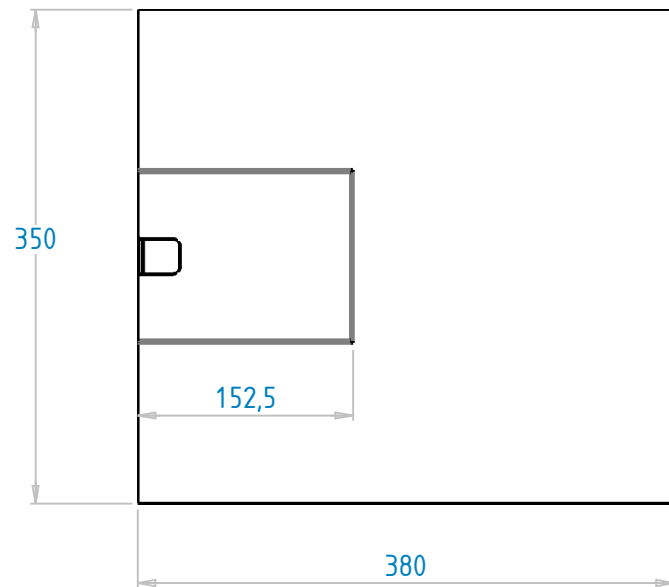

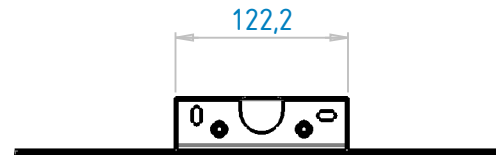

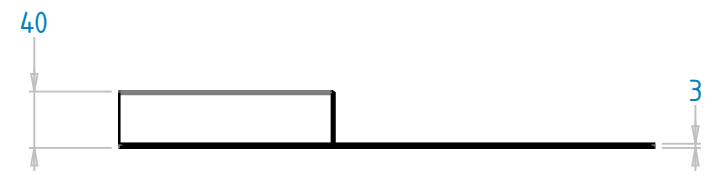

1- Remove the protective shell (A)

FIG.5

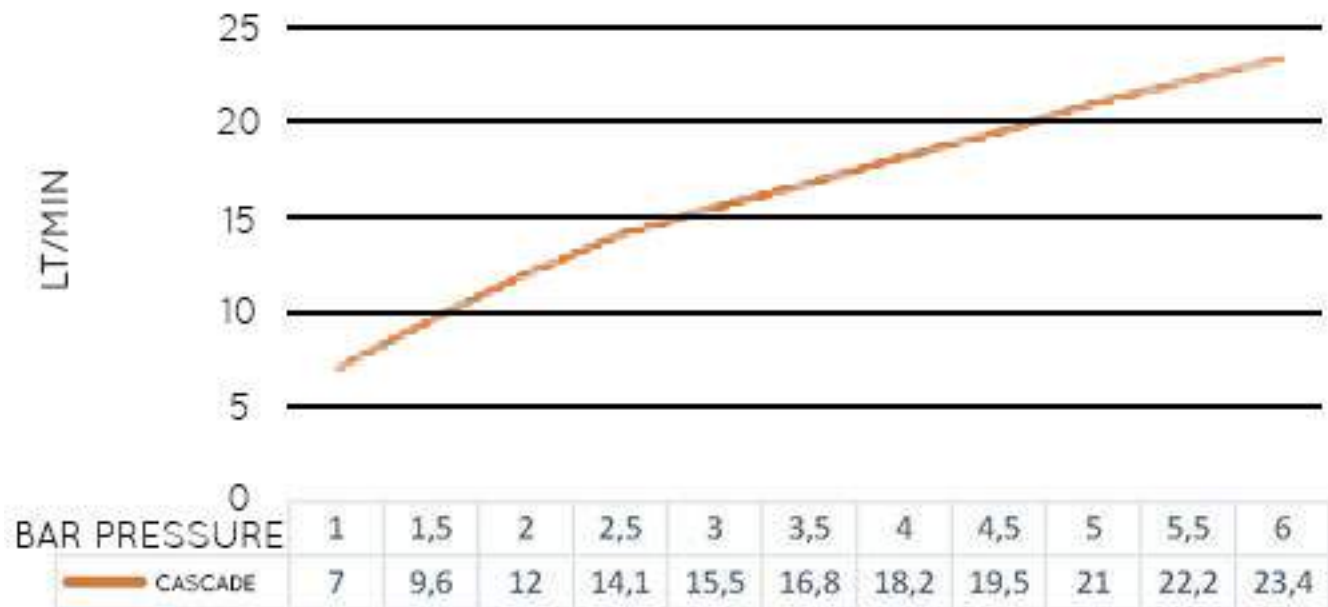

8 - Place the protective shall (A) back

version in satin,
finish parallel to
this side
